Seattle BBJ contains ‘comforts of a house at 40,000 feet’

As GFI goes to press, the aircraft certification flights for Seattle-based Flight Center’s BBJ are within weeks of completion. The company’s Mark Pool told us: “The FAA has a person in Basel (where the aircraft is being completed) doing the certification flights as we speak. It is a long process from green plane to flying plane but this has been a hassle-free completion.”

Flight Center bought its BBJ in August 2000. The aircraft seats 19 passengers in executive style, has eight auxiliary long-range fuel tanks and was chosen, says the company’s Mark Pool, for several reasons.

He explained: “The aircraft’s best qualities are its state-of-the-art equipment, its extremely long range of 6,000nm, its speed due to the altitude it can fly within and the space for ‘offices.’

“It’s roomy enough to accommodate the two or three key officers of a company for long trips and it contains all the comforts of a house but at 40,000 feet.”

In October 2000, the aircraft flew to Basel, Switzerland for Jet Aviation to start the engineering work for the interior. Said Pool: “We chose Jet Aviation for two reasons: One, they do excellent work and have the expertise and experience of working on large aircraft interiors. And secondly, they are very good at completing aircraft on time.

During the completion process, Jet Aviation constructed a full-size, wood mock-up of the entire aircraft to allow the owner to do an actual walk-through for the purpose of making sure everything was going to be the correct size for the owner’s needs.

The interior consists of six separate compartments, each able to be closed off for privacy. The first section is a crew area, complete with galley, rest area, lavatory and baggage storage area. The passenger sections include a social lounge, a main lounge, a passenger galley, passenger lavatory, executive office and the master bedroom complete with master lavatory.

The aircraft has a satellite telephone communication system, digital phone system, dual fax/scanner and printer machines in

While the Montreal Canadiens have been battling it out in the NHL play-offs this season, centre Steve Yzerman - who regularly travels to games in corporate aircraft - has been extolling the virtues of his latest business jet, a Challenger 601-3A. See page 9 for full story.

New Yorker’s imagination runs wild on Middle East super jumbo project

A New York company has won the right to design a VIP interior for the forthcoming A380 Super jumbo. President Edene Doret was approached by a Middle Eastern customer at the Paris Air Show last year and his company - Edene Doret Industrial Design - is now busy completing the two-deck interior.

Doret told GBJ: “Working on this project is like being in a designer’s playground. There’s so much room to play with that you can just let your imagination run wild.

“Having said that, when I was first approached, it took me by surprise because I had never actually conceived of the idea of putting a VIP interior into such a large aircraft. Up until now, we have only worked on some Boeing and Airbus wide-body aircraft so I figure we had quite a task ahead of us.

“The project is in its preliminary stages and says Doret, involves the use of every inch of the aircraft for the owner’s use and comfort. He said: “We’ve been working on the project for about 10 months now and our concept work should be complete by September.

“We’re also planning a CGI animated walk-through of the aircraft so you can get a pretty good feel for what the aircraft will look like when it’s completed. It’s an excellent tool for customers, particularly if you’re not a visual person per se.”

Asked about any restrictions Doret had to adhere to during the project, he said: ‘We have been pretty much free to create whatever we wanted and whatever the client asked of us. Admittedly, there were some pie in the sky requests like a jacuzzi and a pool table but we’ve pulled him back from things that we didn’t think

Latin America gets its own EBACE

Latin America finally has an international business aviation exhibition of its own - courtesy of Brazil’s ABAG and North America’s NBAA. LABACE will take place on January 16, 17 and 18, 2003 and is expected to become the most efficient gathering of Latin American business aviation buyers and sellers.

Speaking from ABAG’s (Assocacao Brasileira de Aviacao Geral) headquarters in Sao Paulo, executive director Adalberto Felebiano told GBJ: “Brazil is the world’s second largest market for business aviation, Argentina is very large and we also have strong markets in countries like Venezuela and Colombia.

‘The object of the exhibition is to provide a location where Latin American buyers and the rest of the world’s sellers can meet, discuss their respective needs and do business.

“We also want to promote the image of business aviation as an important tool for companies here.’

More than 300 vendor-sponsored exhibits will display equipment in the air-conditioned Transasera Expo Center and 20 minutes from there, a static display of aircraft will be located on Congonhas Airport, the leading business aviation airport in Brazil.

The Convention is set to offer a wide range of programmes and local regulatory officials will be on-hand for briefings and feedback.

With regard to ABAG’s partnership with NBAA in this venture, Felebiano said: “We need NBAA for their management capabilities. They are very much experienced in organising shows. They’ve partnered with EBAF for EBACE and the show that we have in our mind will be very similar to that.”

ABAG says it’s expecting 3,000 to 4,000 visitors at the show and will be marketing LABACE through press and direct mail campaigns.
